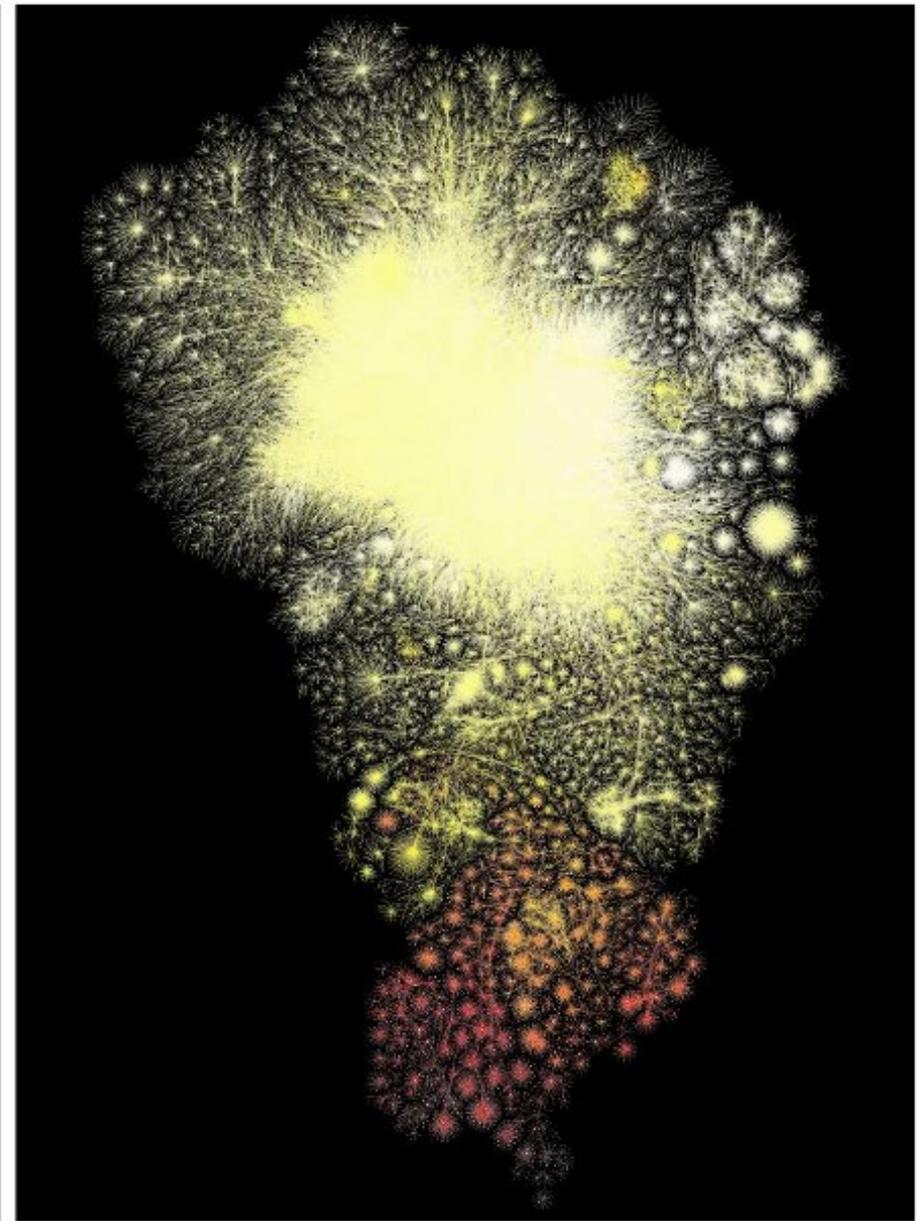

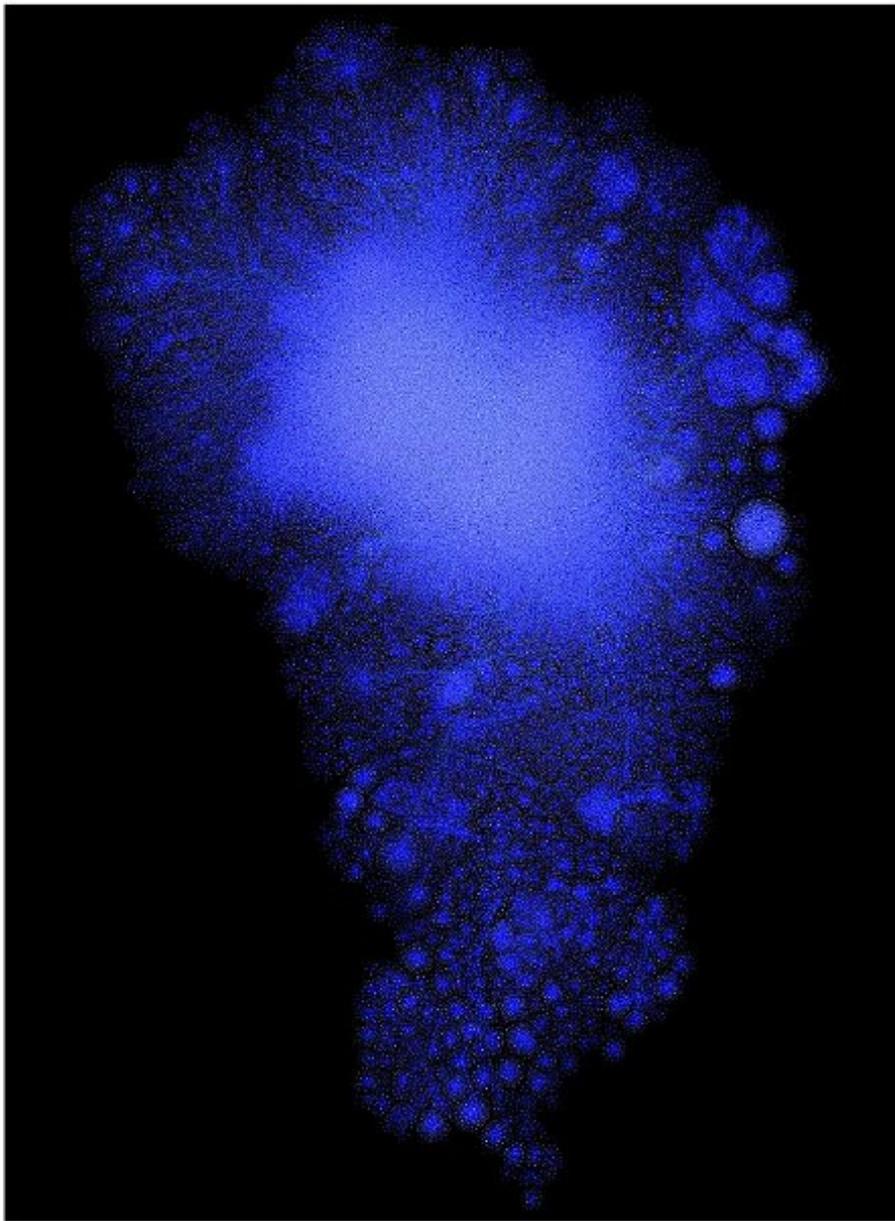

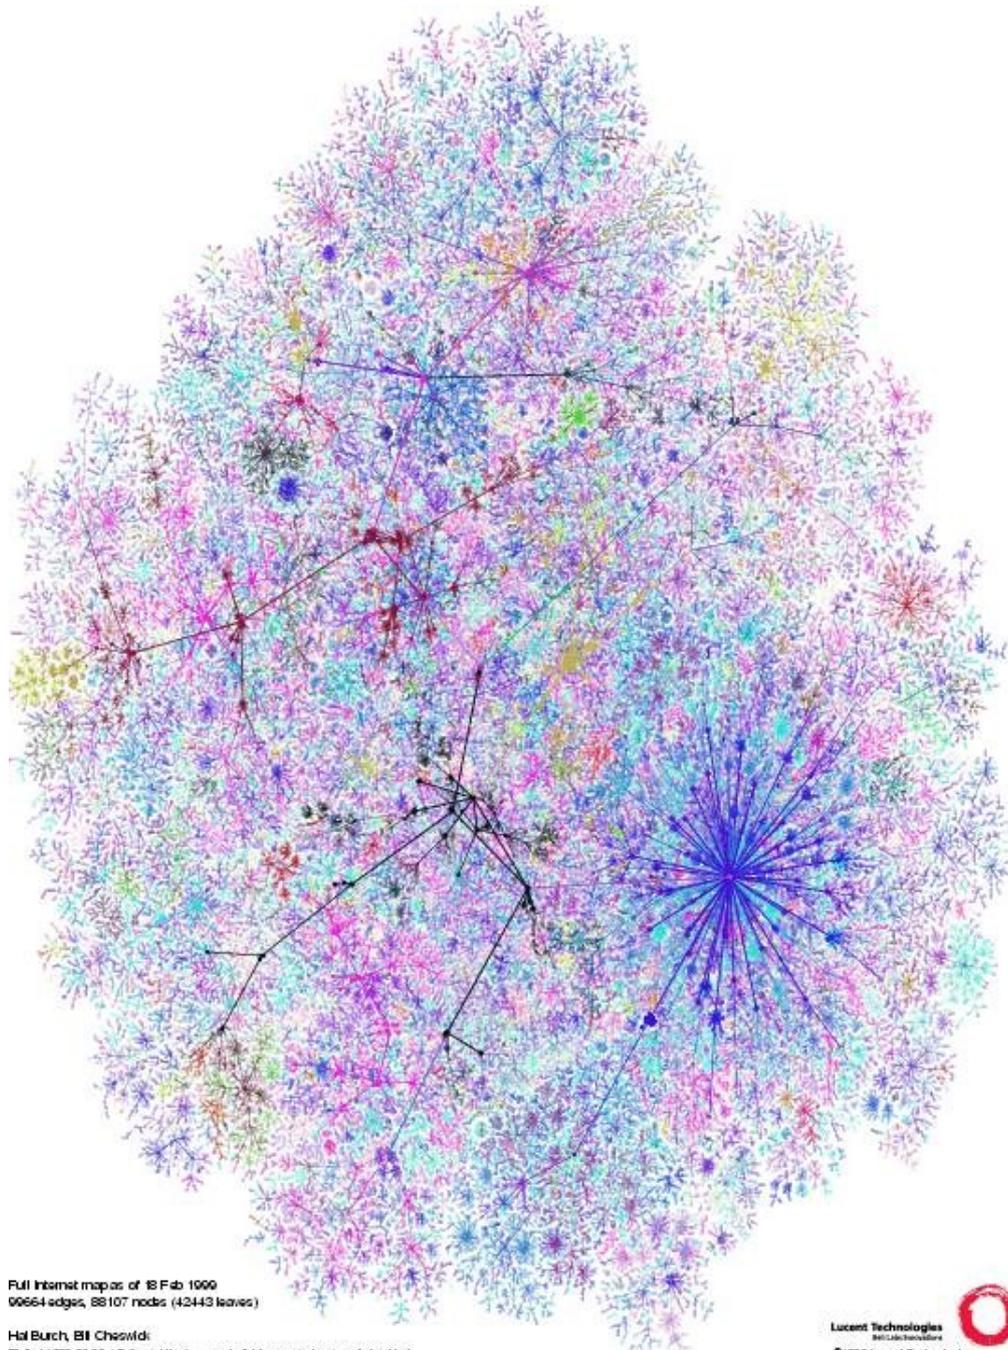

Figure 3.2: The layout computed by the `lgl` program shows more tangible structure. The colors of the left figure are drawn as in figure 3.1, whereas the edges in the right figures are drawn based on the distance from the root of the spanning tree used for the layout. Yellow indicates an edge close to the root and red indicates an edge far from the root. This figure shows the tree-like structure and a core-region of the LCSH graph.

Full Internet map as of 18 Feb 1999
90664 edges, 88107 nodes (42443 leaves)

Hal Burch, Bill Cheswold
Plotted 1 999-02-23 (r5 2 - 5) <http://www.cba.hawaii.edu/~cheswold/infoc.html>

Working Group on the Future of Bibliographic Control

3.1.2 Integrate Library Standards into Web Environment

- 3.1.2.1 All: Express library standards in machine-readable and machine-actionable formats, in particular those developed for use on the Web.
- 3.1.2.2 All: Provide access to standards through registries or Web sites so that the standards can be used by any and all Web applications.
- 3.1.2.3 LC: Begin transitioning LC-managed vocabularies to a platform that is both Web services-friendly and allows files to be downloaded for incorporation into other applications. These vocabularies include the many lists that are used in bibliographic records such as language and geographic codes, resource format codes, etc.

3.1.3 Extend Use of Standard Identifiers

- 3.1.3.1 LC: Generate standard Web-based identifiers for all data elements and vocabularies that LC maintains.
- 3.1.3.2 All: Work to include standard identifiers for individual data elements in bibliographic records, both prospectively and retrospectively, wherever such identifiers are defined, and work to identify changes in metadata carrier standards necessary to incorporate and use such identifiers.

Web 2.0 means using the web as it was meant to be used, and Google does. That's their secret. The web naturally has a certain grain, and Google is aligned with it. That's why their success seems so effortless.

--Paul Graham

Future of Bibliographic Control

Future of Bibliographic ~~Control~~ *Ecosystems*

... libraries and related organizations are well placed to mint persistent and reusable 'http' URIs for much of this stuff ... provided they drag themselves out of the old world of text strings on cards and into the new world of the Web and the URI.

--Andy Powell
